

Component Map: VELFAC 200 ENERGY - Top-Guided Residential Window

LONG-LIFE SYSTEM COMPONENTS

- Wood-aluminium frame system
- Exterior aluminium cladding
- Interior timber frame
- Main sash structure
- Window opening geometry
- Wall/window interface

These components define the long-term service life of the window system. Retaining them is important for avoiding full replacement.

long-term retention

VELFAC 200 ENERGY window system

Wood-aluminium frame
Triple glazing
Top-guided opening
Reference size: 1230 x 1480 mm

frame retained

RISK POINTS THAT MAY TRIGGER FULL REPLACEMENT

- IGU seal failure
- Loss of thermal performance
- Unavailable compatible spare parts
- Difficult access to sealed components
- Factory-finished composite junctions
- Unclear circular disassembly route
- Made-to-measure dimensions limiting reuse
- Use phase excluded from EPD boundary

missing conditions

These points may reduce the practical benefit of repairability or product-life extension.

EXTENDED SERVICE LIFE

Retain long-life frame
Replace only short-life parts

FULL-SYSTEM REPLACEMENT RISK

Premature replacement
Burden shifting
Implementation gap

SHORT-LIFE / WEAR COMPONENTS

- Hardware and opening mechanism
- Hinges / friction arms
- Handles and locking elements
- Weather seals and gaskets
- Insulating-glazing edge seal
- Surface finish and coating
- Drainage and exposed weather details

These parts are more likely to fail, wear, degrade or require adjustment before the full frame reaches end of life.

wear / failure

REPAIRABLE / REPLACEABLE COMPONENTS

- Selected fittings and accessories
- Handles
- Adjustment-related hardware
- Some seals or gaskets
- Possible glazing unit replacement
- Maintenance of hinges and handles
- Cleaning and lubrication

Guidance exists for maintenance and selected replacement, but the full list and long-term spare-part availability are not fully confirmed.

component repair

LIFECYCLE VERIFICATION

Check whether repair, replacement, transport, spare parts, service life and end-of-life assumptions still support a real environmental benefit.
